

Starting a Licensed Fire Alarm Company

Sell · Install · Certify · Service · Monitor

Texas State Fire Marshal licensing, FAL exam prep, and City of Houston rules

Prepared for: Allan A. Moreira

Adding fire alarm services alongside an existing POS installation business

Prepared: September 22, 2026

Planning guide only – not legal advice. Fees, forms, and code editions change; confirm each item with TDI-SFMO, PSI, and the City of Houston before you file or pay.

OVERVIEW

How this guide works

Texas regulates fire alarm work through the **State Fire Marshal's Office (SFMO)** at the Texas Department of Insurance, under **Texas Insurance Code Chapter 6002** and the Fire Alarm Rules in **28 Texas Administrative Code §34.600**. The City of Houston then adds its own contractor registration, plan review, permits, and inspections on top. This guide walks through every step in order: forming the company, passing the Fire Alarm Technician (FAL) exams, filing with SFMO, registering in Houston, setting up monitoring, and running jobs so they pass inspection.

The one rule that shapes everything

A company registration (ACR) is issued to the business; a license is issued to a person. SFMO will not register a company without a licensed full-time employee, and will not issue a license until the person is employed by a registered company. That is why the company and individual applications are filed together.

The big picture

Figure 1. What has to exist before you can legally do fire alarm work in Houston.

Phases at a glance

Phase	What you do	Typical time
1. Business setup	LLC, EIN, bank account, sales-tax permit, insurance quotes	1-3 weeks
2. Choose licensee	Decide who takes the exams and will be the full-time designated licensee	Week 1
3. Study & exams	Pass TFM11 (Statutes & Rules) and TFM12 (Technical) at PSI	8-12 weeks
4. SFMO filing	Fingerprints, insurance certificate, company + FAL applications, fees	2-6 weeks for processing (varies)

Phase	What you do	Typical time
5. Houston setup	City contractor registration, iPermits account, local AHJ contacts	1-3 weeks
6. Monitoring & supply	Wholesale central station, distributor accounts, inspection software	2-6 weeks, in parallel
7. Operate	Permitted installs, acceptance tests, ITM contracts, monitoring	Ongoing
8. Grow	NICET III / ESA III → APS license for in-house design	Year 2

SECTION 1

Which licenses you need

Your goal is to sell, install, certify, service, and monitor. The **Fire Alarm Technician (FAL)** license covers all five of those on commercial and residential systems. The only thing it does not allow is **planning** (designing systems and producing the drawings the fire department reviews). That requires the **Fire Alarm Planning Superintendent (APS)** license.

	Sell	Plan/Design	Install	Certify	Service/ITM	Monitor
APS - Planning Superintendent	✓	✓	✓	✓	✓	✓
FAL - Fire Alarm Technician	✓	○	✓	✓	✓	✓
RAS - Residential Superintendent	✓	R	✓	✓	✓	✓
AMT - Monitoring Technician	○	○	○	○	○	✓
RAL - Residential Technician	○	○	R	R	R	○

✓ = commercial + residential R = 1- and 2-family dwellings only ○ = not allowed

Figure 2. Scope of work by license type (per TDI's license/test table).

License	How to qualify	Initial / 2-yr renewal
FAL - Fire Alarm Technician (start here)	Pass TFM11 Statutes & Rules + TFM12 Technical. TFM12 can be replaced by NICET Level II exam requirements or a current ESA Level II Fire Alarm Technician certification.	\$120 / \$200
APS - Planning Superintendent (year-2 goal)	Pass TFM11 + NICET Level III Fire Alarm Systems, or current ESA Level III Fire Alarm Designer, or be a Texas PE.	\$120 / \$200
AMT - Monitoring Technician	TFM11 + TFM14 Monitoring. Only needed if you run your own monitoring station.	\$120 / \$200
RAS - Residential Superintendent	TFM11 + TFM12 + TFM13 Residential. Adds planning for 1- and 2-family homes.	\$120 / \$200
ACR - Company registration	Licensed full-time designated employee + liability insurance certificate + SF031.	\$500 / \$1,000
ACR Branch	Each additional office doing the same work needs its own branch registration and licensee.	\$150 / \$300 each

Two definitions that trip people up

“Certify” means the licensee certifies the system meets Chapter 6002. It does **not** mean you can issue a UL certificate or placard saying a system meets central-station requirements. Also, “service” includes inspecting, maintaining, repairing, and testing.

Practical path while you don't have an APS

Until someone on staff holds an APS, subcontract design to an APS holder or a Texas PE and have your FAL crew install, test, certify, service, and monitor. Houston requires fire alarm drawings stamped by an APS registered with the submitting company or by a Texas PE, so the designer's arrangement must be set up before you bid design-build work.

SECTION 2

Phase 1 - Create the business

Keep fire alarm work in its own entity. Life-safety work carries far more liability than POS installation, and a claim should not be able to reach the restaurant group or the roofing company.

Step	Where / how	Notes to get it right
Form the LLC	Texas Secretary of State – Certificate of Formation (Form 205) via SOSDirect	Pick a name you will use everywhere. The insurance certificate must show the full legal name plus every DBA.
Assumed name (DBA)	Assumed Name Certificate with SOS if you'll market under another name	Any DBA must also appear on the SFMO insurance certificate.
EIN	IRS online EIN application (free)	Needed for bank, payroll, distributor accounts.
Sales & use tax permit	Texas Comptroller	Ask a CPA how to tax new construction vs. repair/remodel of commercial property.
Business bank account	Any bank	Keep fire alarm money separate from POS and other businesses.
Payroll + workers' comp	Payroll provider; insurance agent	Your designated licensee must be a full-time employee – put them on payroll.
Operating agreement	Attorney	Cover ownership, and what happens if the licensee leaves (the company loses its qualifier).

Insurance

SFMO's minimum is general liability of **\$100,000 per occurrence / \$300,000 aggregate**, on an **occurrence** policy, **including products and completed operations**. The certificate must list the SFMO as certificate holder, show the business types covered (e.g., fire alarm), include the policy number (no “TBD”), and be signed by a Texas-licensed agent. Renewals must show no lapse.

Coverage	SFMO minimum	What clients/GCs usually expect
General liability (occurrence, incl. products & completed ops)	\$100k / \$300k	\$1M / \$2M or higher
Workers' compensation	Not in SFMO rule	Usually required by GCs and property managers
Commercial auto	Not in SFMO rule	\$1M combined single limit is common

Coverage	SFMO minimum	What clients/GCs usually expect
Errors & omissions / professional	Not in SFMO rule	Strongly advised once you design or monitor
Umbrella	Not in SFMO rule	Often requested on larger commercial jobs

Check exclusions

Ask your agent for an insurer experienced with fire/life-safety contractors. Many general policies exclude alarm monitoring or professional (design) exposure – read the exclusions before binding.

SECTION 3

Phase 3 - The FAL exams (TFM11 + TFM12)

Figure 3. Exam path for the Fire Alarm Technician license.

Exam format and rules (from TDI)

- All SFMO tests are **closed book, 50 questions**, true/false or multiple choice; some questions refer to a drawing, chart, or figure.
- Passing score is **70%**. PSI sends your official scores to SFMO.
- You may schedule each test **only once a week** and **no more than three times in 12 months**. Don't "test to see what's on it."
- No questions are about a specific manufacturer's equipment, except as generally referenced by an NFPA standard.
- Third-party prep sites list the PSI exam fee at about **\$65 per test** and 120 minutes per exam – confirm both in PSI's Candidate Information Bulletin before paying.

How to register and where to test (Harris County)

Step	Details
1. Create PSI account	Go to psiexams.com/txfire (Texas State Fire Marshal). Your name must match your government photo ID exactly.
2. Download the Candidate Information Bulletin	It lists current fees, ID rules, rescheduling/cancellation deadlines, and the reference list.

Step	Details
3. Schedule	Online, by phone at 800-733-9267 , or by email at examschedule@psionline.com . Choose a Houston-area PSI test center from the location list at scheduling – PSI runs test centers in Houston; pick the one closest to you and confirm its address in your confirmation email.
4. Test day	Arrive early with valid government photo ID. No books, notes, or phones in the testing room.
5. After the test	Keep your score report. You will attach proof of passing with the SFMO license application.

Order of operations – follow TDI, not prep websites

TDI's instructions say an individual must **pass all required tests and have a fingerprint background check on file** before submitting a new license application. Some private prep websites describe a different order (apply first, then test). Follow TDI's order, and if anything is unclear call SFMO Licensing at 512-676-6800, option 1.

SECTION 4

Study resources for TFM11 and TFM12

Know which edition you're studying

Questions are based on the standards SFMO has adopted in **28 TAC §34.607**. The update that took effect **September 1, 2023** adopted **NFPA 72 (2019 edition)** and **NFPA 70 / NEC (2020 edition)**, along with NFPA 13-2019, 17-2021, 17A-2021, 25-2020, 90A-2021, 101-2021, and UL 827. Check §34.607 once more before you buy books in case SFMO has adopted newer editions since.

Test	What's on it (per TDI)	Primary sources
TFM11 Statutes & Rules	Texas law and SFMO rules: license types and scope, registration, insurance, fees, renewals, employee rules, labels/tags, records, violations and penalties.	Texas Insurance Code Ch. 6002 (free at statutes.capitol.texas.gov) 28 TAC §34.600 Fire Alarm Rules (free on the Texas SOS rules site)
TFM12 Technical	NFPA 72 except the household chapter; NEC Art. 760 and 300; relevant parts of NFPA 13, 17, 17A, 25, 90A. Topics: applicable standards, equipment and circuits, wire and cable, detector operating principles, device location/spacing, detection/supervisory/notification circuits, testing requirements and frequency, general electrical principles.	NFPA 72-2019 NEC 2020 (Art. 760, 300) NFPA 13, 17, 17A, 25, 90A (sections referenced by 72)

Resource list

Resource	Type	Why use it
Texas Insurance Code Ch. 6002	Free – statute	100% of TFM11 is drawn from 6002 + the TAC rules. Read it twice and make flashcards of every number (days, dollars, years).
28 TAC §34.600 (Fire Alarm Rules)	Free – rules	Definitions, licensing, labels/tags, installation certificates, monitoring rules. Pair with 6002.

Resource	Type	Why use it
NFPA free-access (nfpa.org)	Free – read-only online	Read NFPA 72 and the NEC online at no cost to study before buying.
NFPA 72-2019 (and 2019 Handbook)	Paid – book	Core of TFM12. The Handbook's commentary explains the “why,” which helps on application questions.
NEC 2020 – Art. 760 & 300	Paid – book	Fire alarm circuit wiring (PLFA/NPLFA), cable types, separation, support.
TDI “Fire alarm registration, license, and test information” page	Free – official	The official list of TFM12 topics and references. Use it as your syllabus.
PSI Candidate Information Bulletin	Free – official	Fees, ID rules, rescheduling, and the reference list for your exam.
RocketCert – Texas Fire Alarm exam prep	Paid – online course	Texas-specific prep course; advertises a pass guarantee. Compare against syllabus above.
Fire Cert Academy – free Texas FAL sample test	Free / paid practice	Baseline test to find weak areas. Their full TX course was still being built as of May 2026.
NICET Fire Alarm Systems Level II materials	Paid – optional	If you prefer, meeting NICET II exam requirements replaces TFM12 and builds toward NICET III/APS.
ESA / NTS Certified Fire Alarm Technician (Level II)	Paid – course	Classroom/online path; a current ESA Level II certification also replaces TFM12.
Manufacturer factory training (Fire-Lite, Notifier, Silent Knight, Edwards, Potter, etc.)	Often low-cost	Not on the exam, but required by many distributors before they sell panels to you.

Avoid dump sites

Sites selling “actual exam questions with verified answers” are unreliable and often written for older code editions. Study the adopted editions from the source documents instead.

12-week study plan

Figure 4. Suggested schedule: take TFM11 around week 5, TFM12 around week 12.

High-yield topics to master for TFM12

- Smoke and heat detector spacing, ceiling height and beam/joist rules, and where detectors cannot be placed (NFPA 72 Ch. 17).
- Audible/visual notification: sound pressure levels above ambient, candela ratings and spacing, synchronization (Ch. 18).
- Circuit/pathway classes (A, B, X, N) and survivability levels (Ch. 12).
- Inspection and testing frequencies – memorize the Ch. 14 tables (visual inspection vs. test, monthly / quarterly / semiannual / annual).
- Secondary power: battery standby and alarm durations, battery calculations (Ch. 10).
- Supervising station signals, transmission methods, and timing (Ch. 26).
- Elevator recall, HVAC shutdown, door release – emergency control functions (Ch. 21).
- NEC 760: power-limited vs. non-power-limited circuits, cable types (FPL/FPLR/FPLP), separation from other circuits.

SECTION 5

Phase 4 - Fingerprints, application packet, and fees

Fingerprints (IdentoGO)

- Submit SFMO's **formal intent request** (on TDI's fingerprint page) to receive the SFMO fingerprint **service code**.
- Schedule at IdentoGO online or by phone at **888-467-2080** using that service code. Houston has multiple IdentoGO locations.
- Bring photo ID and payment (credit card, business check, or money order – **no cash or personal checks**).
- Prints go electronically to Texas DPS and the FBI. Attach a **copy** of the IdentoGO receipt to your application; keep the original.

The application packet

Fees: \$500 company registration + \$120 FAL license (combine into one payment)

Figure 5. Everything goes in together, paid with a single combined payment.

Item	Form / source	Checks before sending
Company registration	SF031 – Fire Alarm Certificate of Registration Application	Legal name matches SOS filing and insurance; designated full-time licensee named.
Individual license	SF032, or online through Sircon (“new insurance license”)	Signed by applicant and an authorized company signer. Sircon generally needs the Applicant's Employer Information form.
Insurance	Certificate of Liability Insurance	SFMO as holder, OCCUR box checked, policy number, limits, products & completed ops, agent's signature and license #.
Test results	PSI score reports (or NICET/ESA proof)	Both TFM11 and TFM12 passed.
Background check	IdentoGO receipt copy	Taken with SFMO service code.
Payment	One payment for all fees	\$500 ACR + \$120 FAL = \$620. Fees are non-refundable.

Mail to: State Fire Marshal's Office, PO Box 12107, Austin, TX 78711-2107 (or file through Sircon). Licenses and registrations are now delivered **only by email** to the address on file – use an address you monitor.

After you are licensed - keeping it valid

- SFMO sends a renewal notice 90 days before expiration; after the first renewal, renewals are every two years.
- Continuing education: prep providers report 8 hours per renewal cycle for the fire alarm license – confirm the current requirement with SFMO at your first renewal.
- Company address or signer changes: Company Information Update Form (SF227), \$20.
- Licensee changes employer or needs a duplicate: SF033 revision/transfer, \$20.
- Licensee leaves: file the Licensed Employee Termination Notice (SF228) and replace them – the company cannot stay registered without a licensee.
- Insurance renewals: file the new certificate with no gap in coverage.

SECTION 6

Phase 5 – City of Houston and Harris County

State licensing lets you do the work; the **authority having jurisdiction (AHJ)** where the building sits decides permits, plan review, and inspections. Inside Houston city limits that is the **Houston Fire Marshal's Office (HFMO)**, located at the Houston Permitting Center.

Requirement	Details
Contractor registration	Fire alarm contractors must be licensed/registered with TDI-SFMO and registered with the City of Houston. Email copies of your SFMO registration and licenses to the Permits Office as instructed in the Houston Permitting Center's commercial permitting guide.
iPermits account	Permit applications are filed electronically through iPermits. Request a licensed-contractor iPermits account.
Plan review	HFMO's fire alarm team reviews fire alarm plans as part of building code enforcement plan review.
Who stamps drawings	Per a 2026 industry permit guide: drawings stamped/signed by a Texas APS registered with your company, or by a Texas PE in the fire protection discipline. Confirm with HFMO before your first submittal.

Requirement	Details
Annual alarm permit	Houston requires an annual fire alarm permit for systems that can automatically summon HFD. A 2026 industry guide lists about \$111.81 new / \$83.86 renewal, renewed at least 10 days before expiration – verify current fees.
False alarms	The Fire Permits Office also collects false-alarm fees – good installation and monitoring verification protect your customers.
Construction-phase rules	HFD publishes procedures for remodeling/demolition in buildings with a required fire alarm system and for keeping systems operating during construction.
Key contacts	Houston Permitting Center, 1002 Washington Ave. · Houston Fire Marshal's Office main line 832-394-6900.

Harris County is not one jurisdiction

Outside Houston city limits the AHJ changes. Unincorporated Harris County is handled by the Harris County Fire Marshal's Office, and cities like Pasadena, Baytown, Katy, Pearland, and Sugar Land each run their own fire marshal permits and plan review. Before bidding any job, confirm the AHJ and its submittal rules.

How a permitted job flows

Recurring revenue lives in steps 9-10: monitoring contracts + annual inspection/testing agreements.

Figure 6. Typical commercial fire alarm project in Houston.

SECTION 7

Phase 6 - Monitoring and supply chain

Monitoring model

A company that monitors its own station must show SFMO that its central station is **listed or certified by an approved testing laboratory** and complies with NFPA 72, and must list the licensees at each monitoring location. That is a large build (UL-listed facility, redundancy, 24/7 staffing). The practical route is to contract with a **UL-listed wholesale central station** that is registered with SFMO. You own the customer and the contract; they provide the listed facility and operators.

Your company owns the customer + contract; the wholesale station provides the listed facility and operators.

Figure 7. Signal flow with a wholesale central station.

Choosing a central station - ask for	Why
UL listing certificate (UL 827) and SFMO registration number	Required for fire monitoring in Texas; your customers' AHJ may ask for it.
Dealer portal, account setup time, and zone-list templates	Speeds commissioning and reduces setup errors.
Supported communicators (cellular / IP / dual path)	POTS lines are disappearing; dual-path cellular/IP is the norm.
Timer tests and supervision handling	Missed daily/periodic test signals should generate service tickets for you.
Pricing per account, contract term, and portability	Protects your margin and lets you move accounts if needed.

Supply chain and tools

- **Distributor accounts** for panels, devices, wire, and batteries. Many brands require factory training before selling to a new dealer.
- **Inspection/reporting software** that produces NFPA 72-compliant reports and tracks due dates for every account.

- **Test equipment:** smoke and heat detector testers, sound level meter, multimeter, battery load tester, ladders/lifts.
- **Contracts** reviewed by an attorney: installation, inspection/testing, and monitoring agreements (limitation of liability matters most for monitoring).
- **Tags and labels** required by SFMO rules for installation, service, and inspection (see Section 8).

SECTION 8

Doing every job correctly - compliance checklist

On every job

Rule	What it means in practice
Stay inside license scope	FAL can install, certify, service, and monitor – no planning. No APS on staff? Design comes from a subcontracted APS or Texas PE.
Licensed people do regulated work	Each person performing regulated fire alarm work needs the appropriate SFMO license for that work.
Permit before work	In Houston, no installation or modification without the approved permit on site.
Follow the adopted edition	Work to the NFPA 72 / NEC editions adopted in 28 TAC §34.607 and any stricter local amendments.
Repair vs. alteration	Swapping a like-for-like device is service; changing panels, adding devices, or changing functions may be an alteration needing plans and a permit.
Listed and compatible equipment	Devices must be listed and compatible with the panel; keep compatibility documents in the job file.
Document everything	Record of completion, installation certificate (SFMO form SF035 for fire alarm installations), inspection and test reports kept on file.
Tags and labels	SFMO rules (28 TAC §34.623) set yellow and red labeling procedures for systems with deficiencies or impairments, with required owner/AHJ notifications. Learn these for TFM11 and follow them exactly in the field.
Monthly test to monitoring	Monitored systems must send periodic test signals; investigate any missed test.
Report to the owner in writing	List every deficiency found, what you fixed, and what remains; keep the signed copy.

Things that commonly cause violations

- Doing design work (layouts, drawings) without an APS or PE.
- Letting the insurance lapse or not filing the renewal certificate.
- Working for a company other than the one your license is issued under.
- Starting work before the permit is approved or skipping the acceptance test.
- Using unlicensed helpers for regulated tasks.
- Not updating SFMO when the licensee leaves or company info changes.

If you add security systems later

Burglar alarms, CCTV, and access control – natural add-ons to POS work – are licensed by the **Texas DPS Private Security Program**, not SFMO. If you plan to offer them, apply for that license separately; SFMO registration does not cover security work.

SECTION 9

Master timeline and startup budget

Figure 8. Suggested 24-month timeline (months across the top).

Known state fees and typical startup costs

Item	Cost	Source / note
SFMO company registration (ACR)	\$500 (renewal \$1,000 / 2 yrs)	TDI fee table
FAL license	\$120 (renewal \$200 / 2 yrs)	TDI fee table
PSI exams TFM11 + TFM12	≈ \$65 each	Prep-site figure – confirm in PSI bulletin
Fingerprints (IdentoGO)	Set by IdentoGO	Confirm at scheduling
Code books (NFPA 72-2019, NEC 2020)	Varies	Or study free read-only on nfpa.org
Prep course / practice tests	Varies	Optional but recommended
General liability + WC + auto	Quote-based	Largest recurring startup cost
LLC formation (Texas SOS)	State filing fee	Plus attorney/CPA if used
Houston contractor registration & permits	Per City fee schedule	Annual alarm permits billed per system
Test equipment + tools	Varies	Detector testers, meters, lifts
APS/PE design subcontract (until you have APS)	Per project	Build into bids

Your built-in first customer

Once licensed, your own 19 restaurant locations are a natural first book of business: annual fire alarm inspections and testing, plus monitoring. Kitchen hood suppression systems (NFPA 17A) often tie into the alarm panel. Suppression systems themselves require a separate SFMO fire extinguisher license and registration – a good second expansion.

SECTION 10

Master checklist

☐	Task	Owner	Done
☐	Form fire alarm LLC with Texas SOS; file DBA if used		
☐	Get EIN; open business bank account		
☐	Texas Comptroller sales & use tax permit; CPA review of taxability		
☐	Decide designated licensee; put on payroll as full-time employee		
☐	Get insurance quotes; confirm GL meets \$100k/\$300k occurrence incl. products & completed ops		
☐	Download TIC 6002, 28 TAC 34.600; buy/access NFPA 72-2019 and NEC 2020		
☐	Create PSI account at psiexams.com/txfire; read Candidate Information Bulletin		
☐	Schedule and pass TFM11 (Statutes & Rules)		
☐	Schedule and pass TFM12 (Technical)		
☐	Submit SFMO fingerprint formal intent; get service code		
☐	Fingerprint at IdentoGO; keep receipt		
☐	Bind insurance; get certificate with SFMO as holder		
☐	Assemble SF031 + SF032/Sircon + insurance + scores + receipt; one payment		
☐	Receive ACR and FAL by email; save copies		
☐	Register with City of Houston; request iPermits contractor account		
☐	Identify AHJs for surrounding cities / unincorporated Harris County		
☐	Sign APS/PE design subcontract		
☐	Contract with UL-listed wholesale central station		
☐	Open distributor accounts; complete factory training		
☐	Set up inspection/reporting software and job file templates		
☐	Attorney-reviewed install, ITM, and monitoring contracts		
☐	Stock SFMO-required tags/labels and SF035 forms		
☐	Calendar renewals, insurance, and CE		
☐	Plan NICET III or ESA III → APS license		

SECTION 11
